

# Chapter 5.1 Practice Key

Using the modified TM concept of showing  $A_{TM} \leq E_{TM}$  of:

- TM  $M_w$ : "on input  $x$ :
  1. If  $x \neq w$ , reject
  2. If  $x = w$ , run  $M$  on  $w$ :
    1. Accept if  $M$  accepts  $w$ .
    2. Reject if  $M$  rejects  $w$ ."

Use the approach above to show that the following languages are undecidable.

1.  $L_1 = \{\langle M \rangle \mid M \text{ is a TM and } 01 \in L(M)\}$

TM  $M_1$ : "on input  $x \in \{0,1\}^*$ :

- a. If  $x \neq 01$ , reject  $x$ .
- b. Else, run  $M$  on  $w$ :
  - i. Accept if  $M$  accepts  $w$ .
  - ii. Reject if  $M$  rejects  $w$ ."

2.  $L_2 = \{\langle M \rangle \mid M \text{ is a TM and } 01 \cup 10 \in L(M)\}$

TM  $M_1$ : "on input  $x \in \{0,1\}^*$ :

- a. If  $x \neq 01$  or  $x \neq 10$ , reject  $x$ .
- b. Else, run  $M$  on  $w$ :
  - i. Accept if  $M$  accepts  $w$ .
  - ii. Reject if  $M$  rejects  $w$ ."

3.  $L_3 = \{< M > \mid M \text{ is a TM and } (10)^* L(M)\}$

TM  $M_1$ : “on input  $x \in \{0,1\}^*$ :

- a. If  $x \neq (10)^*$ , reject x.
- b. Else, run M on w:
  - i. Accept if M accepts w.
  - ii. Reject if M rejects w.”
